ZEPHYR

HyperCore™ Release Notes

version 1.2.77

Improvements to Connectivity and Software Updates

More reliable Wi-Fi connectivity — We've improved how the cooktop recovers from certain Wi-Fi issues, helping it stay connected and reducing situations where manual troubleshooting may be needed.

More reliable software delivery — We've reduced cases where available software updates could be delayed, helping connected cooktops receive improvements and fixes more consistently.

Your cooktop needs to be plugged in and connected to Wi-Fi for the update to install. It should install automatically overnight, but you can trigger installation in the settings menu once it has been downloaded if you want the update sooner.
